WORLD SOVEREIGNTY FUND

A public share in technological prosperity.

A proposal by Dennie Jared Frank · Introduction prepared 20 November 2026

The idea

Build permanent public wealth alongside the existing economy. Participating community-owned automation enterprises would contribute an agreed share of verified net earnings to a lasting Fund, with the goal of supporting people, communities and the Earth.

How the proposed system connects

Community enterprises	Provide useful goods and services under human ownership and oversight.
Costs and obligations	Pay wages, supplies, energy, maintenance, financing, taxes and reserves first.
Robot Banking	Account for and transfer the agreed net contribution through authorized arrangements.
Permanent public Fund	Build and invest capital; determine what can sustainably be distributed.
Birthright System	Connect eligible people to approved payments in ordinary spendable money.

The initial allocation, and a one-day dream

70% people · 20% community development · 10% ecological stewardship.
A future aspiration would reserve 1% for a world allocation, changing the personal share to 69%. Its purpose, timing and governance would need agreement. These shares apply to approved distributable resources, not gross business revenue.

What needs to happen first

Confirm the organizational and financial foundations; obtain independent review; test one community project against real demand, full costs, safety and transparent accounts. A proposed Alberta greenhouse is a concept for assessment, not an announced operating pilot.

Current stage

This is a proposal in development. No current Birthright income, guaranteed investment return or payment start date is promised. Signing, donating or subscribing does not enrol someone for payments. A variable dividend and a guaranteed income floor require different financing.
